

# UltraFlex Hose

## UltraFlex Hose

### WHERE PIPING SYSTEMS NEED TO BE FLEXIBLE

Many applications experience high vibration, flow surges and periodic shock. UltraFlex Hose is an ideal solution to combine wear resistance, layout flexibility and isolation in both hydraulic and pneumatic piping systems.

#### **Considerations for this effective solution:**

- Long service life with excellent abrasion resistance resulting from high-grade tube material.
- Low installation costs with hose flexibility and adaptation to curves without prior forming and accommodating joints between unaligned rigid pipes.
- Ease of installation and maintenance continues with lightweight construction, simple coupling systems and long hose lengths.
- Reduced maintenance costs with outstanding vibration attenuation, deadening of hammering and reuse of couplings/flanges.
- Robust structure to withstand heavy compressive loads and vacuums.
- Hardened, full-flow hose bodies.
